

## HYK 系列伺服控制器

### HYK series servo controllers

伺服控制器在伺服控制系统中，是接受系统指令和反馈的位置、速度、力、或者角位置、角速度、扭矩传感器的电信号，调制解析后输出伺服阀能接受的电信号。控制伺服阀提供相应的液压能（流量和压力）输出，带动伺服油缸或伺服马达等执行元件做功，从而达到控制机械的位置、速度、力、或者角位置、角速度、扭矩的目的。伺服控制器也是伺服系统的核心，它的精度决定了伺服控制系统的整体精度。

In the servo control system, the servo controller receives the position, speed and force instructed and fed back by the system, or electric signals of angular position, angular velocity and torque sensor, and outputs the electrical signal received by the servo valve after modulation analysis. It controls the servo valve to provide corresponding hydraulic energy (flow and pressure) output, and drives the servo cylinder or servo motor and other actuating elements to act so as to reach the purpose of controlling the position, speed, force, or angular position, angular velocity, and torque of the machine. The servo controller is also the core of the servo system, and its accuracy decides the overall accuracy of the servo control system.

## HYK-SVC-AO 系列伺服阀控制器

### HYK-SVC-AO series servo valve controllers

#### 产品简介

#### Product overview

HYK-SVC-AO 伺服阀控制器（单通道，模拟开环）是专门为伺服阀而设计的一款控制电路，可以将客户提供 PLC、工控机等前端控制器输出的控制信号转换为伺服阀可以接受的信号，能够配合伺服阀调整相关参数，同时含外置调零偏、调增益、输入输出保护等功能。

HYK-SVC-AO servo valve controller (single channel, simulated open loop) is a control circuit especially designed for the servo valve. It can convert control signals output by PLC, industrial personal computer and other front-end controllers provided by customers into the signals that the servo valve can accept. Besides, it can cooperate with the servo valve to adjust relevant parameters and has such functions as external zero bias adjustment, gain adjustment, input and output protection.

## 安装尺寸 (单位 mm)

## Mounting dimension (unit: mm)

## 功能特性及技术参数

## Functional characteristics and technical parameters

使用条件 Service conditions s	
供电 Power supply	参见供电选择 Refer to power supply selection
连接线 Connecting wire	建议采用每根大于或等于 0.3 平方毫米屏蔽电缆 The shielded cable greater than or equal to 0.3 mm <sup>2</sup> is recommended
环境温度 Ambient temperature	-20°C~80°C
环境湿度 Ambient temperature	35-85%RH
环境气体 Environmental gas	周围无腐蚀性气体 No corrosive gas around
电磁干扰 Electromagnetic interference	周围无强的电磁干扰波 No strong electromagnetic interference around
振动 Vibration	无剧烈振动 No violent vibration

性能 Performance		
静态 Static	线性度 Linearity	1%
	零偏 Zero bias	1%
	对称度 Symmetry	1%
	温漂 Warm-up drift	<90ppm/°C
动态 Dynamic	频宽 Band	≥200Hz 也可以根据客户特殊需要定制 ≥200Hz can also be customized according to the special needs of customers

物理特征 Physical characteristics	
重量 Weight	1.1kg
尺寸 Size	155mmX147mmX55mm (4 个安装孔) 155mm X 147mm X 55mm (4 mounting holes)

功能 Function	
输入 CMD Input CMD	参见控制信号选择 Refer to control signal selection
输出 SV Output SV	参见阀控电流选择 Refer to selection of valve control current
使能: Enabling: Disable-SVC	可以控制阀控电流的通断: 给 Disable-SVC Be able to control valve control current on/off: give Disable-SVC 一个 5V 信号, SV 输出断开; a 5V signal, SV output is off; Disable-SVC 接 GND 或空接时, SV 输出电流, 控制器正常工作 Disable-SVC is connected to GND or null, SV outputs current, and the controller works normally
低通滤波 Low pass filtering	可以减少干扰-80dB,根据客户要求来定截止频率 Be able to reduce -80dB disturbance; the cut-off frequency is determined as required by customers
信号调整 Signal adjustment	可以根据客户特殊需要选择 Be able to choose as required by customers
颤振 Flutter	改善伺服阀静态精度 Improve static accuracy of servo valve
调整 Adjustment	零偏 调整阀的零偏 Zero bias adjust zero bias of the valve 增益 调整阀的增益 Gain adjust gain of the valve
保护 Protection	输入级: 单向信号输入反接, 输出自动断开≤10V Input level: reverse connection of one-way signal input, automatic output disconnection ≤10V 限压输入, ≤100mA 限流输入。 Input with limited voltage, ≤100mA input with limited current. 输出级: 1.5 倍 SV 限流输出。 Output level: 1.5 times of SV output with limited current. 电源: 220VAC 插座 0.15A 熔断保险。 Power supply: 220VAC socket, 0.15A fuse. 内部±VCC 各有一个 0.5A 熔断保险。 There is a 0.5A fuse respectively in internal VCC±.
